How to apply: Click [here](#) to apply

Deadline: 6 June 2025

Who We Are

At EarthEnable, we believe that our clients deserve our very best, that morning high-fives are the best way to start the day, and that the best ideas could come from any part of the company. We celebrate each other's wins, learn from our setbacks, and are deeply proud of the impact we make every day. We believe that a clean, dust-free floor means more than living in a healthy home. It means pride and dignity in the place our customers most treasure: their homes. Being a part of our team means more than building floors: it means building an organization and building a better future for rural families.

What We Do

EarthEnable is transforming the way people live, by making homes healthier for families across rural Rwanda. 75% of Rwandans live in homes with dirt floors which are dusty, unsanitary, and fertile breeding grounds for parasites and germs. While replacing a dirt floor with concrete has significant health benefits (e.g. reducing diarrhea by 50% and parasitic infections by 80%), concrete is unaffordable for many who need it.

EarthEnable addresses this pressing and ubiquitous problem by selling high-quality, earthen floors that are 70% cheaper than concrete with 90% less embodied energy. Earthen floors are already prevalent in modern homes in the United States and are composed of natural materials (gravel, clay, sand, and laterite). EarthEnable trains and hires local masons to install the floors which are sealed using a proprietary drying oil that makes them waterproof, strong, and polished. In its first 9 years of operations, EarthEnable has installed nearly 30,000 floors and plasters in schools and homes, impacting 200,000 individuals, and created livelihoods for nearly 1,000 people.

In Rwanda 95% of houses are built with earth. After 9 years developing and disseminating ultra-affordable healthy building products made from earth, EarthEnable is shifting focus to design and build whole houses that are affordable for rural Rwandans. By expanding to provide houses made of all natural materials, EarthEnable hopes to continue to provide places where people can live healthy lives, while reducing carbon emissions in the construction industry. EarthEnable sees this as a way to dramatically increase our impact, and intends to construct 63 houses by the end of 2026 on two hectares of land located in Gashora.
